### **CAVOK Flies High By Expanding Services To Airlines**

KELLER, TEXAS / BOULDER, COLO (June 22, 2005) – Boosting its services to airlines, CAVOK Group, a privately-held global aviation firm that provides operational support to commercial air carriers, announced today that it is acquiring Wyndemere Incorporated's Flight Operations Quality Assurance (FOQA) program. CAVOK expects to complete the acquisition within four to six months.

Wyndemere, an aerospace consulting firm, will assist CAVOK with the transition. Along with the main program, CAVOK will acquire Wyndemere's FOQA technology and Wyndemere's existing FOQA clients.

The acquisition will further diversify operational support services that CAVOK offers to commercial air carriers. To date, most of the company's support has focused on providing custom maintenance solutions and certification support services to air carriers.

"We're very pleased to be able to offer FOQA services to the industry. These knowledge bases provide air carriers with valuable safety information for flight and maintenance operations. FOQA complements our core services, and Wyndemere has developed an excellent tool that will allow us to provide these services at economical rates," said Jim Sturgis, President of CAVOK.

A FOQA program provides information to airlines that allows them to better understand all aspects of flight operations. FOQA programs use data recorded in-flight so that, through detailed analyses, an airline can evaluate the quality of its flight training programs, Standard Operating Procedures (SOPs), maintenance troubleshooting, and quantifiable risk.

CAVOK will establish a new business unit which will be headed by Managing Director Bob Schmidt. According to Schmidt, CAVOK will continue to develop the FOQA software and will offer its FOQA program independent of other CAVOK services and products. Individual air carriers will perform their own analyses with technological support from CAVOK.

"The sale of our FOQA program represents a major milestone in the evolution of this service offering," said Susan Nedell, President of Wyndemere. "CAVOK's resources will greatly expand the reach and impact of the program's benefits across the range of operational departments at air carriers. Combining CAVOK's current solutions and domain expertise with Wyndemere's highly efficient flight data processing platform will give airlines cost-effective *and* operations-enhancing information second to none."
